CLAIMS

What is claimed is:

1.   A method for receiving on a user device a web page content from a network content server, said method comprising:

requesting, from a user device and via a billing server, a web page content from a network content server;

displaying on the user device at least one offer from the billing server to view at least a portion of the web page content for a cost;

selecting at the user device at least one of the at least one offers;

receiving at the user device the at least a portion of the web page content; and

displaying on the user device the at least a portion of the web page content.

2.   The method of claim 1, wherein the at least one offer is based on a removal of advertisement from the web page content.

3.   The method of claim 1, wherein the at least one offer is based on an age of the at least a portion of the web page content.

4.   The method of claim 1, wherein the at least a portion of the web page content is displayed on a computer device having a limited sized display of less than forty square inches of viewable area.

5.   The method of claim 1, wherein the network content server is on an Internet.

6.   The method of claim 1, wherein the billing server and the network content server are a same device.

7. A system for receiving on a user device a web page content from a network content server, said system comprising:

means for requesting, from a user device and via a billing server, a web page content from a network content server;

means for displaying on the user device at least one offer from the billing server to view at least a portion of the web page content for a cost;

means for selecting at the user device at least one of the at least one offers;

means for receiving at the user device the at least a portion of the web page content; and

means for displaying on the user device the at least a portion of the web page content.

8. The system of claim 7, wherein the at least one offer is based on a removal of advertisement from the web page content.

9. The system of claim 7, wherein the at least one offer is based on an age of the at least a portion of the web page content.

10. The system of claim 7, wherein the at least a portion of the web page content is displayed on a computer device having a limited sized display of less than forty square inches of viewable area.

11. The system of claim 7, wherein the network content server is on an Internet.

12. The system of claim 7, wherein the billing server and the network content server are a same device.

13.   A computer program product for receiving on a user device a web page content from a network content server, said computer program product comprising:

computer program code for requesting, from a user device and via a billing server, a web page content from a network content server;

computer program code for displaying on the user device at least one offer from the billing server to view at least a portion of the web page content for a cost;

computer program code for selecting at the user device at least one of the at least one offers;

computer program code for receiving at the user device the at least a portion of the web page content; and

computer program code for displaying on the user device the at least a portion of the web page content.

14.   The computer program product of claim 13, wherein the at least one offer is based on a removal of advertisement from the web page content.

15.   The computer program product of claim 13, wherein the at least one offer is based on an age of the at least a portion of the web page content.

16.   The computer program product of claim 13, wherein the at least a portion of the web page content is displayed on a computer device having a limited sized display of less than forty square inches of viewable area.

17.   The computer program product of claim 13, wherein the network content server is on an Internet.

18.   The computer program product of claim 13, wherein the billing server and the network content server are a same device.

19.   A method for transmitting web page content from a network content server to a user device, said method comprising:

receiving at a billing server a request from a user device for a web page content from a network content server;

sending to the user device from the billing server a display of at least one offer to view at least a portion of the web page content for a cost;

receiving from the user device at least one selection of the at least one offers; and

sending the at least a portion of the web page content to the user device.

20.   The method of claim 19, wherein the at least one offer is based on a removal of advertisement from the web page content.

21.   The method of claim 19, wherein the at least one offer is based on an age of the at least a portion of the web page content.

22.   The method of claim 19, wherein the at least one offer is defined by a script header to the web page content.

23.   The method of claim 22, further comprising parsing the script header to generate at the user device a display of the at least one offer.

24.   The method of claim 19, wherein the at least a portion of the web page content is formatted to be displayed on a computer device having a limited sized display of less than forty square inches of viewable area.

25.   The method of claim 19, wherein the network content server is on an Internet.

26.   The method of claim 19, wherein the billing server and the network content server are a same device.

27.   A system for transmitting web page content from a network content server to a user device, said method comprising:

means for receiving at a billing server a request from a user device for a web page content from a network content server;

means for sending to the user device from the billing server a display of at least one offer to view at least a portion of the web page content for a cost;

means for receiving from the user device at least one selection of the at least one offers; and

means for sending the at least a portion of the web page content to the user device.

28.   The system of claim 27, wherein the at least one offer is based on a removal of advertisement from the web page content

29.   The system of claim 27, wherein the at least one offer is based on an age of the at least a portion of the web page content.

30.   The system of claim 27, wherein the at least one offer is defined by a script header to the web page content.

31.   The system of claim 30, further comprising means for parsing the script header to generate at the user device a display of the at least one offer.

32.   The system of claim 27, wherein the at least a portion of the web page content is formatted to be displayed on a computer device having a limited sized display of less than forty square inches of viewable area.

33.   The system of claim 27, wherein the network content server is on an Internet.

1   34.   The system of claim 27, wherein the billing server and the network content server

2   are a same device.

35.   A computer program product for transmitting web page content from a network content server to a user device, said computer program product comprising:

computer program code for receiving at a billing server a request from a user device for a web page content from a network content server;

computer program code for sending to the user device from the billing server a display of at least one offer to view at least a portion of the web page content for a cost;

computer program code for receiving from the user device at least one selection of the at least one offers; and

computer program code for sending the at least a portion of the web page content to the user device.

36.   The computer program product of claim 35, wherein the at least one offer is based on a removal of advertisement from the web page content.

37.   The computer program product of claim 35, wherein the at least one offer is based on an age of the at least a portion of the web page content.

38.   The computer program product of claim 35, wherein the at least one offer is defined by a script header to the web page content.

39.   The computer program product of claim 38, further comprising computer program code for parsing the script header to generate at the user device a display of the at least one offer.

40.   The computer program product of claim 35, wherein the at least a portion of the web page content is formatted to be displayed on a computer device having a limited sized display of less than forty square inches of viewable area.

1   41.   The computer program product of claim 35, wherein the network content server

2   is on an Internet.

1   42.   The computer program product of claim 35, wherein the billing server and the

2   network content server are a same device.
